VDL MIXED TRAFFIC TRANSPORT SOLUTIONS

The VDL MTT logistic solution is a generic autonomous truck platform for mixed traffic applications. It is available with a wide range of customer specific load carriers and an automatic battery charging system. Multiple platforms are managed by a fleet manager which interfaces to yard or warehouse management system. This solution is backed with full service and remote diagnostics via an optional app.

At launching customer Aviko, up to 60 Euro-pallets per hour with frozen products are transported and automatically loaded and unloaded by a climatized superstructure, replacing traditional manually operated truck-trailer combinations. The MTT platform is matched with a customer specific superstructure to transport for example pallets, IBC's and containers to provide a fully integrated logistic solution.
